

Safety Services

Safety Audits – Conducting comprehensive audits of existing physical safety equipment, written plans, systems and procedures to identify deficiencies and provide recommendations.

Safety Plan Development – Developing detailed written safety programs customized to the needs of the client and including step-by-step guidelines to ensure compliance with OSHA, insurance providers and local authorities.

Accident Investigation Planning – Creating a process and procedures to be taken by teams (supervisors, management, risk managers) investigating occupational accidents to determine what happened, how and why.

Emergency Response Planning – Developing plans and procedures to provide for the safe, orderly movement and protection of people in a facility in the event of fire, severe weather, bomb threat, workplace violence or other safety-related situation.

Automated External Defibrillator (AED) Training – Creating and implementing an AED program designed to train emergency responders how to use AED units in the process of resuscitation for a person struck with Sudden Cardiac Arrest (SCA).

Workplace Violence Programs – Creating procedures to assist in responding to physical, emotional and verbal threats in the workplace by providing a structured response for all types of potential situations.

Security Systems Management – Preparing programs to manage the security assets of a company – including theft investigation, CCTV, access control systems and guard services – ranging from the development of procedures, task definitions, scheduling and reporting to maintenance management for all types of security systems.

Worker Compensation Programs – Creating and implementing programs, procedures and guidelines designed to facilitate quick return to work and decreased downtime due to occupational injuries.

Safety Committee Organization – Assisting in the organization of a safety-minded group dedicated to increasing the safety awareness in the company by providing a link between employees and management to handle safety issues prevalent in the company.
